Reason for referral: Visually debilitating cataracts right worse than left.

Dear Doctor,

Thank you for seeing Mr Rajdeep Singh who presented to see me for the first time with complaints of gradual reduction in distance and near vision, particularly in the right eye over the last 6-7 months.

Had intensive treatment for kidney and lungs in India regarding infection in October 2024, and now under the care of cardiology, nephrology and pulmonology in Australia.

Unaided visual acuities were: right 6/30- left 6/6.

Best corrected visual acuities were R -4.50DS (VA 6/21-3) L 0.00 (VA 6/6), both eyes 6/6.

Anterior eye findings revealed dense nuclear sclerotic, moderate anterior cortical and mild posterior capsular cataract in the right eye, there was also mild nuclear sclerotic and cortical cataract in the left.

Posterior eye findings were unremarkable.

Intraocular pressures were R 22mmHg, L 19mmHg via non-contact tonometry at 12:30pm.

I am referring Mr. Rajdeep Singh for cataract assessment.

Kind regards,

Yifan Zhang
